MUSHROOM SCUFFS

Our new mushroom shaped scuff pads are great for paint, rust, and oxidation removal, especially in hard to reach areas. The scuff pad is made of nylon web material very similar to Scotch-Brite material which is commonly used to remove rust and light paint. This mushroom-shaped pad design works faster than conventional scuff pads because it can be mounted on a standard drill and spun at speeds up to 1,500 rpm. These scuff pads are perfect for manifold restoration.

SELF PRIMING SIPHON HOSE

This self priming Siphon Hose has a 6' long anti-static, anti-spark hose with a 3/4" diameter copper tip that contains a check valve (a glass ball and stainless steel spring). The secret to the Siphon Hose is in this check valve which make it self-priming.

Just set the copper valve end into your liquid and use a few quick strokes up and down to start the self-priming action of the Siphon Hose. When the fluid in the hose is past the level of the fluid in the tank, you are siphoning from, gravity will take over.

That's it, and in 1 1/2 minutes flat you can transfer 5 gallons of gas (or any other liquid) safely, without any gas in your mouth or on the ground!
